

Program No: 01**Date:16-08-2022****Aim:**Develop android application to implement button click using toast.**Program Code:****activity.xml**

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
xmlns:android="http://schemas.android.com/apk/res/android"
xmlns:app="http://schemas.android.com/apk/res-auto"
xmlns:tools="http://schemas.android.com/tools"
android:layout_width="match_parent"
android:layout_height="match_parent"
tools:context=".MainActivity">

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Hello World!"
        app:layout_constraintBottom_toBottomOf="parent"
        app:layout_constraintLeft_toLeftOf="parent"
        app:layout_constraintRight_toRightOf="parent"
        app:layout_constraintTop_toTopOf="parent" />
    <Button
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:id="@+id/btn1"
        android:textColor="@color/black"
        android:background="@color/cardview_shadow_end_color"
        android:text="Button click" />
```

mainactivity.java

```
package com.example.myapplication;

import androidx.appcompat.app.AppCompatActivity;

import android.os.Bundle;
import android.view.View;
import android.widget.Button;
import android.widget.Toast;

public class MainActivity extends AppCompatActivity {
```

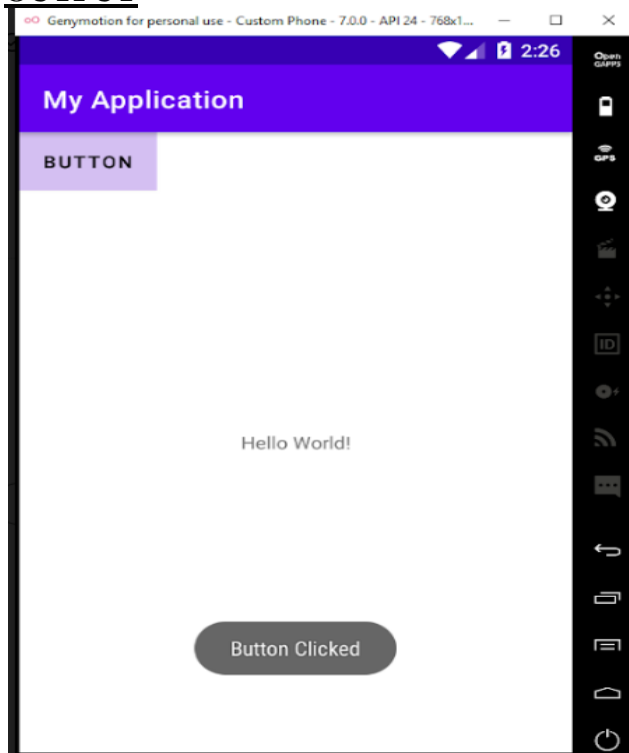

@Override

```
protected void onCreate(Bundle savedInstanceState) {  
    super.onCreate(savedInstanceState);  
    setContentView(R.layout.activity_main);  
    Button b=findViewById(R.id.btn1);  
    b.setOnClickListener(new View.OnClickListener() {  
        @Override  
        public void onClick(View view) {
```

```
            Toast.makeText(getApplicationContext(),"buttonclicked",Toast.LENGTH_LONG).show();  
        }  
    });  
}
```

Result: Program compiled successfully and output verified.

OUTPUT

Aim: Design a login form with Username and Password using linear layout and toast valid credentials.

Program Code:**activity.xml**

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity"
    android:orientation="vertical">

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Login"
        android:textSize="@dimen/cardview_default_radius"/>

    <EditText
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:hint="username"
        android:id="@+id/et1"
    />
    <EditText
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:hint="password"
        android:id="@+id/et2"
        android:layout_marginTop="10dp"
        android:inputType="textPassword"
    />
    <Button
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Login"
        android:id="@+id/btn"
        android:layout_marginLeft="140dp"
    />

</LinearLayout>
```

Mainactivity.java

```
package com.example.pgm2;
import androidx.appcompat.app.AppCompatActivity;

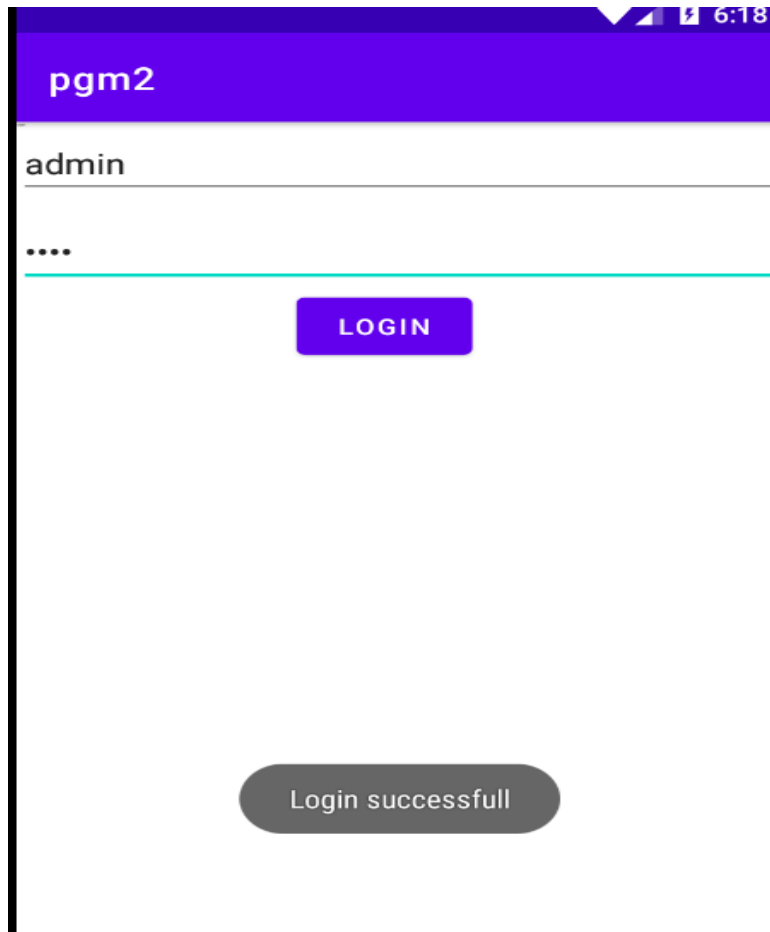

import android.os.Bundle;
import android.view.View;
import android.widget.Button;
import android.widget.EditText;
import android.widget.Toast;

public class MainActivity extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
        EditText et1=findViewById(R.id.et1);
        EditText et2=findViewById(R.id.et2);
        Button button=findViewById(R.id.btn);
        button.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View view) {
                validate(et1.getText().toString(),et2.getText().toString());
            }
            private void validate(String us,String pw)
            {
                if(us.equals("admin")&&pw.equals("1234"))
                {
                    Toast.makeText(getApplicationContext(),"Login
successful",Toast.LENGTH_LONG).show();
                }
                else
                {
                    Toast.makeText(getApplicationContext(),"Unsuccessfull
login",Toast.LENGTH_LONG).show();
                }
            }
        });
    }
}
```

Result: Program compiled successfully and output verified.

Output

Aim: Write a program to demonstrate the activity life cycle.

Program Code:**activity.xml**

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
xmlns:android="http://schemas.android.com/apk/res/android"
xmlns:app="http://schemas.android.com/apk/res-auto"
xmlns:tools="http://schemas.android.com/tools"
android:layout_width="match_parent"
android:layout_height="match_parent"
tools:context=".MainActivity">

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Hello World!"
        app:layout_constraintBottom_toBottomOf="parent"
        app:layout_constraintLeft_toLeftOf="parent"
        app:layout_constraintRight_toRightOf="parent"
        app:layout_constraintTop_toTopOf="parent" />
```

Mainactivity.java

```
package com.example.myapplication;

import androidx.appcompat.app.AppCompatActivity;

import android.os.Bundle;
import android.util.Log;

public class MainActivity extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
        Log.d("lifecycle", "onCreate invoked");
    }

    @Override
    protected void onStart() {
        super.onStart();
        Log.d("lifecycle", "onStart invoked");
    }
}
```

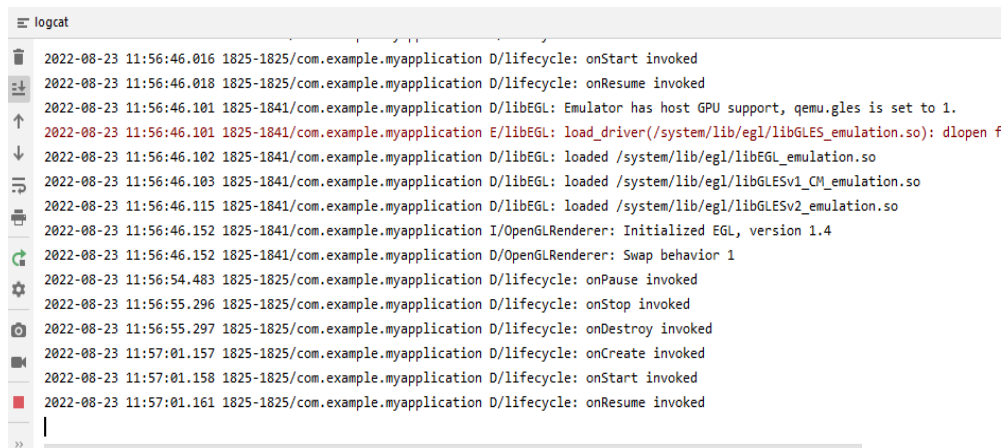

```

    }
    @Override
    protected void onResume() {
        super.onResume();
        Log.d("lifecycle", "onResume invoked");
    }
    @Override
    protected void onPause() {
        super.onPause();
        Log.d("lifecycle", "onPause invoked");
    }
    @Override
    protected void onStop() {
        super.onStop();
        Log.d("lifecycle", "onStop invoked");
    }
    @Override
    protected void onRestart() {
        super.onRestart();
        Log.d("lifecycle", "onRestart invoked");
    }
    @Override
    protected void onDestroy() {
        super.onDestroy();
        Log.d("lifecycle", "onDestroy invoked");
    }
}

```

Result: Program compiled successfully and output verified.

Output

```

</RelativeLayout>

```

MainActivity2.java

```

package com.example.myapplication6;

```

```
import androidx.appcompat.app.AppCompatActivity;

import android.os.Bundle;

public class MainActivity2 extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main2);
    }
}
```

Result: Program compiled successfully and output verified.

OUTPUT

The screenshot shows a mobile application interface with a purple header bar containing the text "My Application6". Below the header, the title "Registration form" is centered. The form consists of several input fields, each with a label and a text entry area. The labels and their corresponding values are: "Thasni" for the name field, "22" for the age field, "thasnisaleem1999@gmail.com" for the email field, "Puthiyaveettil(H)" for the address field, "Female" for the gender field, and "MCA" for the course field. A blue button with the text "SUBMIT" is located at the bottom left of the form area.

Aim: Web application to implement implicit intent

Program Code:

activity.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"

<androidx.constraintlayout.widget.ConstraintLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity4">
    <TextView
        android:layout_width="match_parent"
        android:layout_height="match_parent"
        android:text="In February 2021, Ronaldo became the first person in the world
to reach 500 million followers across Facebook, Instagram and Twitter.">

    </TextView>
</androidx.constraintlayout.widget.ConstraintLayout>
```

MainActivity4.java

```
package com.example.pgm10;

import androidx.appcompat.app.AppCompatActivity;

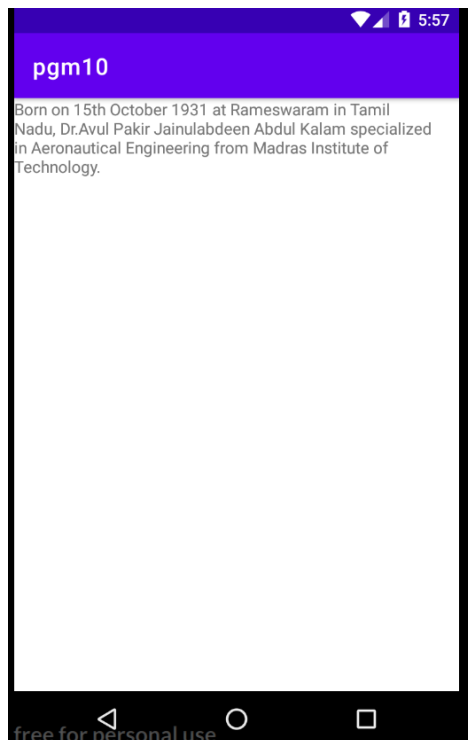

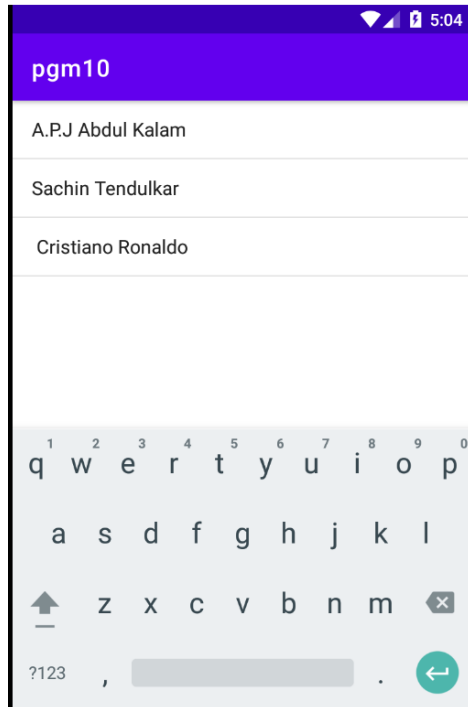

import android.os.Bundle;

public class MainActivity4 extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main4);
    }
}
```

Result: Program compiled successfully and output verified.

OUTPUT

Program No:11

Date:03-11-2022

Aim: Develop an application that toggles an image using frame layout.

Program Code:

Activity main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<FrameLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">

    <ImageView
        android:id="@+id/image1"
        android:layout_width="match_parent"
        android:layout_height="match_parent"
        android:scaleType="centerCrop"
        android:src="@drawable/pic1"/>
    <ImageView
        android:id="@+id/image2"
        android:layout_width="match_parent"
        android:layout_height="match_parent"
        android:scaleType="centerCrop"
        android:src="@drawable/pic2"/>

</FrameLayout>
```

MainActivity.java

```
package com.example.pgm11;

import androidx.appcompat.app.AppCompatActivity;

import android.media.Image;
import android.os.Bundle;
import android.view.View;
import android.widget.ImageView;

public class MainActivity extends AppCompatActivity {
    ImageView i1,i2;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
        i1=findViewById(R.id.image1);
```

```

i2=findViewById(R.id.image2);
i1.setOnClickListener(new View.OnClickListener() {
    @Override
    public void onClick(View view) {
        i1.setVisibility(view.GONE);
        i2.setVisibility(view.VISIBLE);
    }
});
i2.setOnClickListener(new View.OnClickListener() {
    @Override
    public void onClick(View view) {
        i1.setVisibility(view.VISIBLE);
        i2.setVisibility(view.GONE);
    }
});
}
}
}

```

Result: Program compiled successfully and output verified.
